

BLINKIT SALES & OPERATIONS ANALYSIS

PROJECT SUMMARY

1. PROJECT OVERVIEW

This project involved analysing Blinkit sales and operational data using Microsoft Excel and Power BI. The project followed a structured analytical workflow beginning with raw data inspection and preparation, followed by analysis, dashboard development, and business interpretation.

2. PROJECT OBJECTIVE

The primary objective was to analyse sales performance and understand patterns across product categories, outlet characteristics, and other relevant business dimensions.

3. DATA ANALYSIS PROCESS

The project followed the following process:

- Raw business data was reviewed and examined.
- The dataset was cleaned and prepared for analysis.
- PivotTables were created to summarise key business dimensions.
- Excel-based analysis was performed to identify patterns.
- An Excel dashboard was developed to visually present important findings.
- A Power BI dashboard was created to provide an interactive view of the analysis.
- The results were reviewed to identify business performance patterns.

4. KEY ANALYTICAL AREAS

- The analysis focused on:
- Sales performance
- Product category contribution
- Outlet performance
- Outlet size comparison
- Outlet location comparison
- Product characteristics
- Key business performance indicators

5. TOOLS USED

Microsoft Excel

Used for data preparation, PivotTable analysis, calculations, and dashboard development.

Power BI

Used for interactive data visualisation and dashboard-based business analysis.

6. SKILLS DEMONSTRATED

Data Cleaning | Data Preparation | Exploratory Data Analysis | PivotTable Analysis | KPI Analysis | Data Visualization | Dashboard Development | Business Intelligence | Insight Generation

7. PROJECT OUTCOME

The project resulted in a structured analytical workflow that transformed raw business data into cleaned datasets, analytical summaries, Excel visualisations, and an interactive Power BI dashboard.

The project demonstrates practical experience in using Excel and Power BI to analyse business data and present information in a visual format that can support data-driven decision-making.

8. KEY LEARNING OUTCOMES

This project strengthened practical skills in:

- Working with structured business datasets
- Preparing data for analysis
- Creating PivotTable-based analysis
- Developing Excel dashboards
- Building Power BI visualisations
- Understanding business KPIs
- Communicating analytical findings visually
